This is your new Seventh Edition

Faber on Mechanics of Patent Claim Drafting

Seventh Edition

by Robert C. Faber

(Ostrolenk Faber LLP, New York City)

Practising Law Institute is proud to publish the Seventh Edition of Faber on Mechanics of Patent Claim Drafting, by Robert C. Faber. Like its predecessors, the new Seventh Edition is filled with practical advice, useful tips, and extensive examples showing what to aim for—and what to avoid—in drafting patent claims for any kind of invention.

Long recognized as an essential text, Faber remains today’s clearest and most complete guide to patent claim drafting, useful to both experienced practitioners and those new to patent practice.

Updated and expanded, the new edition includes not only established and time-tested principles but also the most recent developments in claim drafting law and practice. For example, the author analyzes the continuing efforts of the courts and the U.S. Patent and Trademark Office to clarify the boundaries of patentable subject matter, addressing at length the Supreme Court’s decision in Alice Corp. Pty. Ltd. v. CLS Bank International and its relation to prior decisions. Supplementing that discussion are two new appendices: Appendix C4, the 2014 Interim Guidance on Patent Subject Matter Eligibility, and Appendix C5, Patent Office Examples of Abstract Ideas.

As always, Faber on Mechanics of Patent Claim Drafting is the volume that claim drafters will keep handy for the guidance they need—whether it concerns computer-based inventions or the latest in biotechnology, drafting the preamble or the transition, using “means” or “step” clauses, the best approaches to dependent claims, understanding what evidence will be relevant in claim construction, or any of the dozens of other critical subjects covered in this book.
